Michael David Warren
Phase 1 Visual Mockup Plan & Figma-Ready Wireframe Specification

Prepared from the uploaded handoff package, audited workbook, and available asset archives.

Files reviewed	Workbook images	Press items	Actual image archive files
8 governing docs + 2 PDFs	75 total / 6 sections	26 press entries	8 Commercial/ECOM files uploaded

1. FILE REVIEW SUMMARY

Files reviewed

- MDW_Designer_Package.pdf and MDW_Designer_Package.docx
- MDW_Portfolio_PRD_v4.docx
- MDW_Visual_Style_Guide_UI_Component_Board.docx
- MDW_Final_Copy_Deck.docx
- 1MDW_Content_Map_Audited_Clean_FIXED.xlsx
- MDW_Engineer_Handoff.docx
- Press kit.pdf
- MDW_Complete_Designer_Handoff_Brief.docx
- Commercial-ECOM.zip

Verified counts by category

Category	Planning target	Workbook verified	Folder/archive verification
Homepage	12	12 usable placements	No standalone homepage folder provided; workbook confirms 11 homepage-tagged images + 1 editorial crossover
Cover	9	9	No folder provided in uploaded package
Editorial	20	20	No folder provided in uploaded package
Beauty	13 requested / 6 in governing docs	6	No folder provided in uploaded package
Commercial / ECOM	8	8	Commercial-ECOM.zip contains 8 image files + 1 rename CSV
Red Carpet	18 requested / 23 in older PRD	18 in governing docs	No folder provided in uploaded package
Press	n/a	26 entries	Press archive exists in workbook; links partially pending

Conflicts found between planning counts and actual uploaded assets

- The governing design documents align on Beauty = 6 and Red Carpet = 18, but the PRD still contains older page structures for Beauty = 13 and Red Carpet = 23. Phase 1 uses the governing counts from the designer package, engineer handoff, style guide, and workbook.
- Homepage target of 12 is supported, but only 11 images are tagged as Primary Section = Homepage inside Images Clean; the 12th slot is intentionally supplied through the Homepage Final locked placement sheet via editorial crossover.
- Only one actual image archive was uploaded in a browsable package: Commercial-ECOM.zip. Cover, Editorial, Beauty, Red Carpet, and Homepage folder-level asset counts could not be independently verified from uploaded image folders because those folders were not present in the uploaded handoff zip.
- MDW_Press_Kit_Draft.docx was requested in the review order but was not present in the uploaded package. Press page planning therefore relies on Press kit.pdf, the copy deck, and the handoff brief.

2. VISUAL DIRECTION SUMMARY

Visual language

Editorial luxury with premium restraint. Black leads. Gold elevates. White gold refines. Jade distinguishes. The site should feel like a fashion publication with booking intent rather than a salon website or portfolio template.

Type direction

Display type should be a refined serif with long horizontal tension for headlines, section titles, and quotes. UI type should be a clean sans serif for navigation, metadata, captions, buttons, and form controls. Headline lines stay short; metadata stays compact and quiet.

Color system

Primary colors: Obsidian Black #111111, Antique Gold #B08D57, White Gold #D8D1C5, Deep Jade #145B4B, Soft Jade Mist #C7D9D2. Use black and white-gold as the main field colors; reserve gold for keylines and emphasis; reserve jade for selective states, highlights, and tags.

Spacing philosophy

Generous margins, wide gutters, and deliberate image breathing room. Avoid packed galleries. Use a modular 8px spacing logic with 24, 40, 64, 96, and 144 as dominant vertical steps. Every page should read in calm editorial bands rather than crowded blocks.

Motion / interaction philosophy

Motion stays subtle and editorial: slow image zoom on hover, underline reveals, fade-ins, and micro-lifts. No loud parallax, no busy sliders, no exaggerated hover choreography.

3. PAGE-BY-PAGE MOCKUP PLAN

Desktop homepage mockup direction

Page Goal: Establish prestige, range, and credibility within the first screen while directing high-intent visitors toward portfolio and booking.

Section Order: Slim header, full-width hero, publication strip, 12-image featured composition, portfolio category entry tiles, about preview, press preview, email/signup or insider band, contact/book CTA, footer.

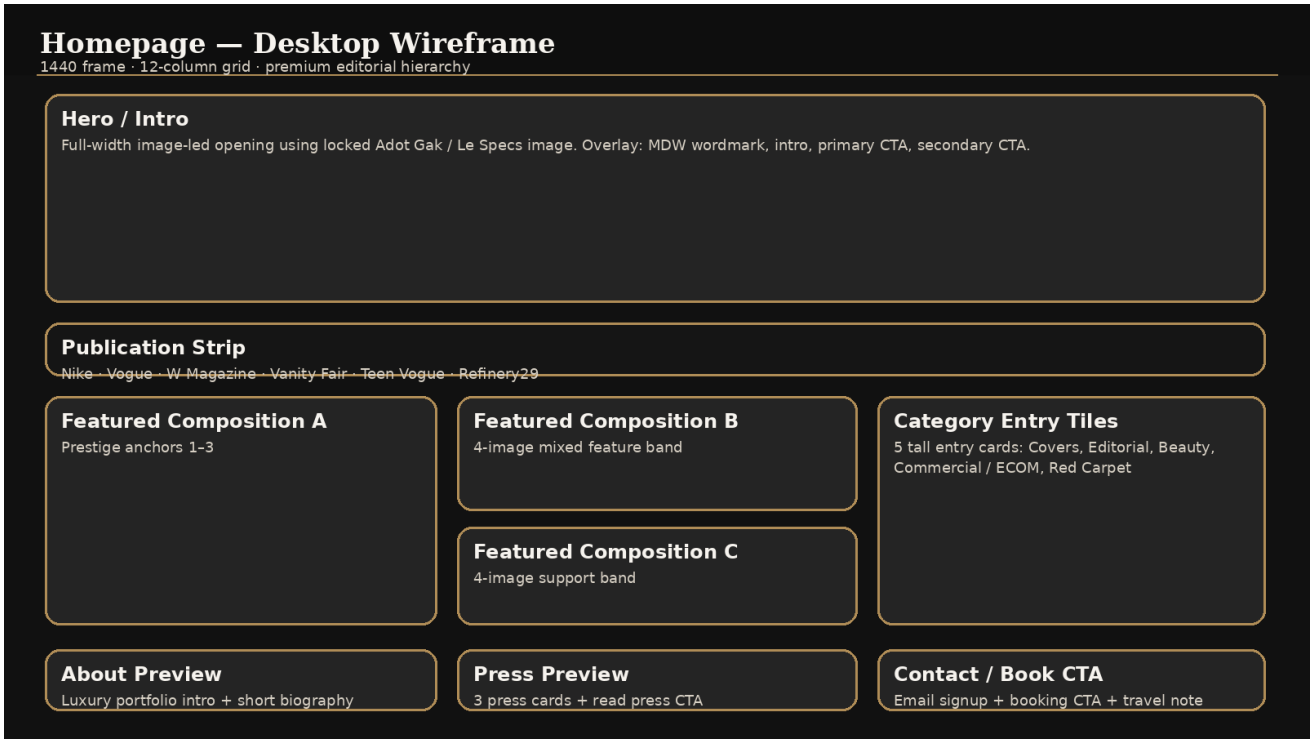
Section Purpose: The homepage acts as a curated editorial cover rather than a full archive. It should quickly prove taste, celebrity/editorial credibility, and booking readiness.

Recommended Layout: Use a 1440 desktop frame with a 12-column grid. Keep the hero dominant and cinematic. Below it, use a deliberately unbalanced composition: 3 prestige anchors, 4-image mixed feature band, 4-image support band, and a vertical column of category entry tiles.

Image Treatment: Hero gets full-bleed treatment with a soft dark overlay for legibility. Support images should preserve crop integrity and avoid forced uniformity. Use portrait-dominant crops with occasional landscape interruptions to keep rhythm.

Copy Placement: Use the approved luxury portfolio intro for the hero. Keep the publication strip compact. Category tiles get one-line portfolio intros from the copy deck. About and Press previews use tightly edited excerpts.

Interaction Notes: Header becomes slightly denser on scroll. Category tiles receive image zoom plus underline reveal. Featured cards can optionally show a quiet metadata overlay on hover.



Mobile homepage mockup direction

Page Goal: Translate the editorial hierarchy to mobile without turning the site into a repetitive single-column image dump.

Section Order: Sticky top bar, portrait hero, compact publication strip, curated image stack, 2-up category tiles, about preview, press preview, booking CTA, footer.

Section Purpose: Mobile must get users to portfolio or contact within two taps while preserving the calm, premium feeling of the desktop composition.

Recommended Layout: 390 mobile frame with a 4-column grid. Use one dominant image, then a rhythm of 2-up and 1-up image groupings. Keep touch targets tall and generous.

Image Treatment: Hero is portrait-first. Support images use adaptive aspect ratios instead of one locked ratio. Avoid cropping faces or hair detail too tightly.

Copy Placement: Keep hero copy to two short lines plus two CTAs. Use one-line category summaries only. Press preview stays to two lead stories on mobile.

Interaction Notes: Menu opens as a full-height overlay. CTA buttons stack. Publication strip can be horizontal-scroll or auto-marquee, but motion remains restrained.

Homepage — Mobile Wireframe

390 frame logic scaled for presentation

Sticky Header + Hero

Portrait crop, short intro, 2 CTAs, menu button

Publication Strip

Compact marquee or scroll band

Curated Mobile Image Stack

1 dominant feature + 2-up row + 1-up + 2-up; preserve rhythm, avoid uniform dump

Category Tiles

2-up cards, final full-width red carpet tile

About Preview

Short edit from approved copy

Press Preview

2 featured press cards

Editorial portfolio category page mockup direction

Page Goal: Show range, taste, and narrative fashion storytelling with stronger hierarchy than a standard gallery page.

Section Order: Hero, 3-feature row, 8-tile main grid, 8-tile lower grid, related press or next-category callout, footer.

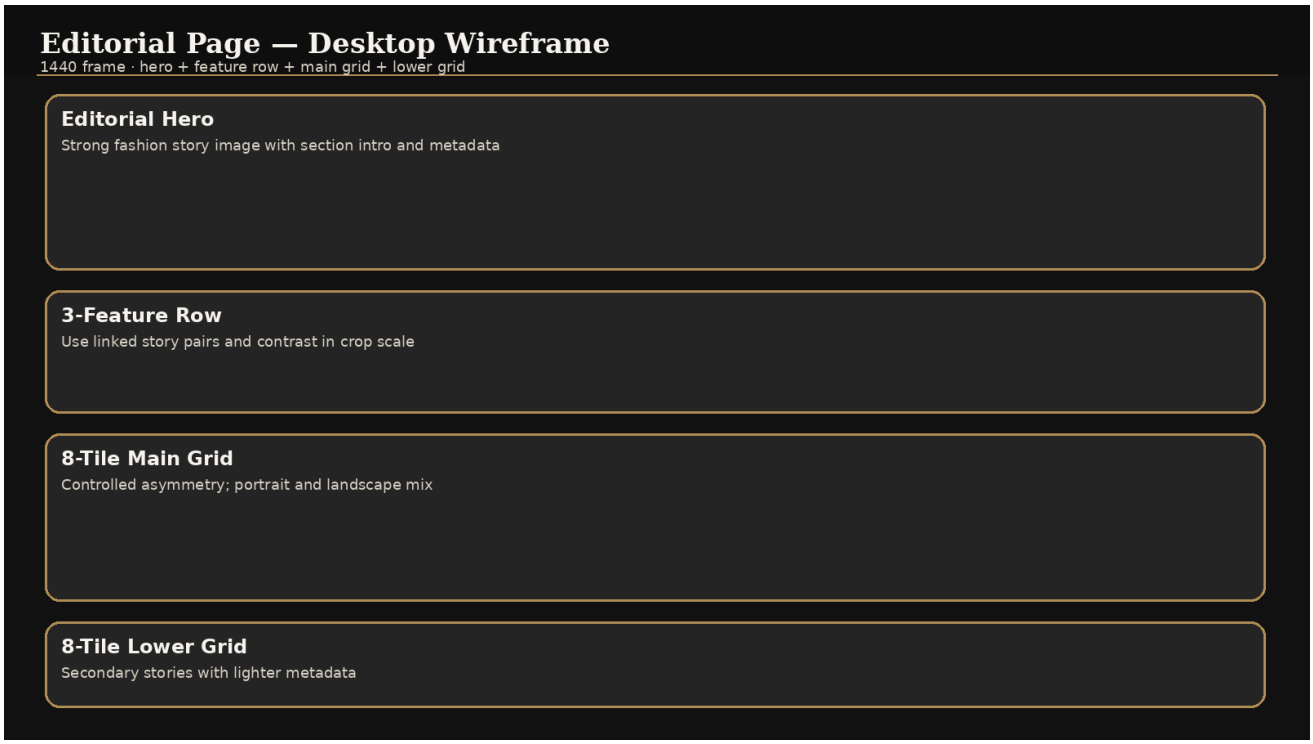
Section Purpose: This page is the storytelling vertical. It should emphasize shoot worlds, image pairing, and editorial pacing.

Recommended Layout: Lead with a large hero image and a quiet intro band. The 3-feature row should showcase linked stories or strong tonal contrast. The 8-tile main and lower grids should be asymmetrical but aligned to a consistent baseline system.

Image Treatment: Support both portrait and landscape photography. Preserve diptychs and related frames from the same story where possible. Avoid repetitive same-size tiles in long runs.

Copy Placement: Use the approved Editorial intro as the page lead. Metadata sits beneath images in a compact editorial caption system: publication or story, talent, year.

Interaction Notes: Hover reveals caption details and optional related-project link. Keyboard focus states mirror hover with a jade underline or keyline.



Red Carpet portfolio category page mockup direction

Page Goal: Project glamour, authority, and event-readiness with a portrait-dominant structure that feels polished and elite.

Section Order: Hero, prestige highlight band, 6-tile mid grid, 6-tile lower grid, category crossover CTA, footer.

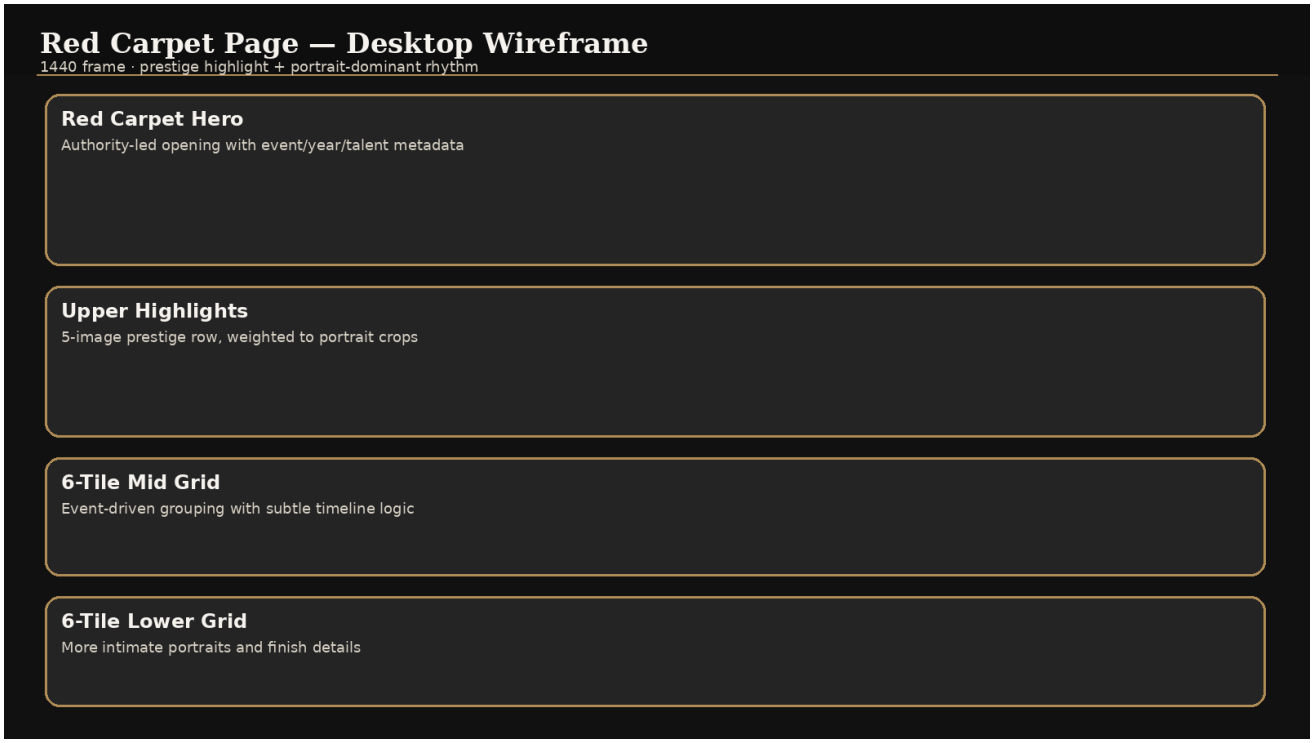
Section Purpose: This page must communicate visibility, high-stakes execution, and camera-aware finish.

Recommended Layout: Use a strong opening portrait or full-length event image. Build an upper highlight band that reads almost like a prestige timeline. Follow with two controlled 6-card groups with consistent metadata alignment.

Image Treatment: Favor portrait crops, full-length silhouettes, medium portraits, and detail crops in deliberate alternation. Maintain elegance rather than paparazzi clutter.

Copy Placement: Use the approved Red Carpet intro. Event metadata should include event/publication/talent/year where available.

Interaction Notes: Hover states should feel quieter than editorial: subtle zoom, title fade-in, and light gold keyline.



Press page mockup direction

Page Goal: Create a credibility hub that serves editors, media teams, and collaborators without feeling blog-like.

Section Order: Press intro, featured press area, archive area, press kit section, bio/credibility block, media contact CTA, footer.

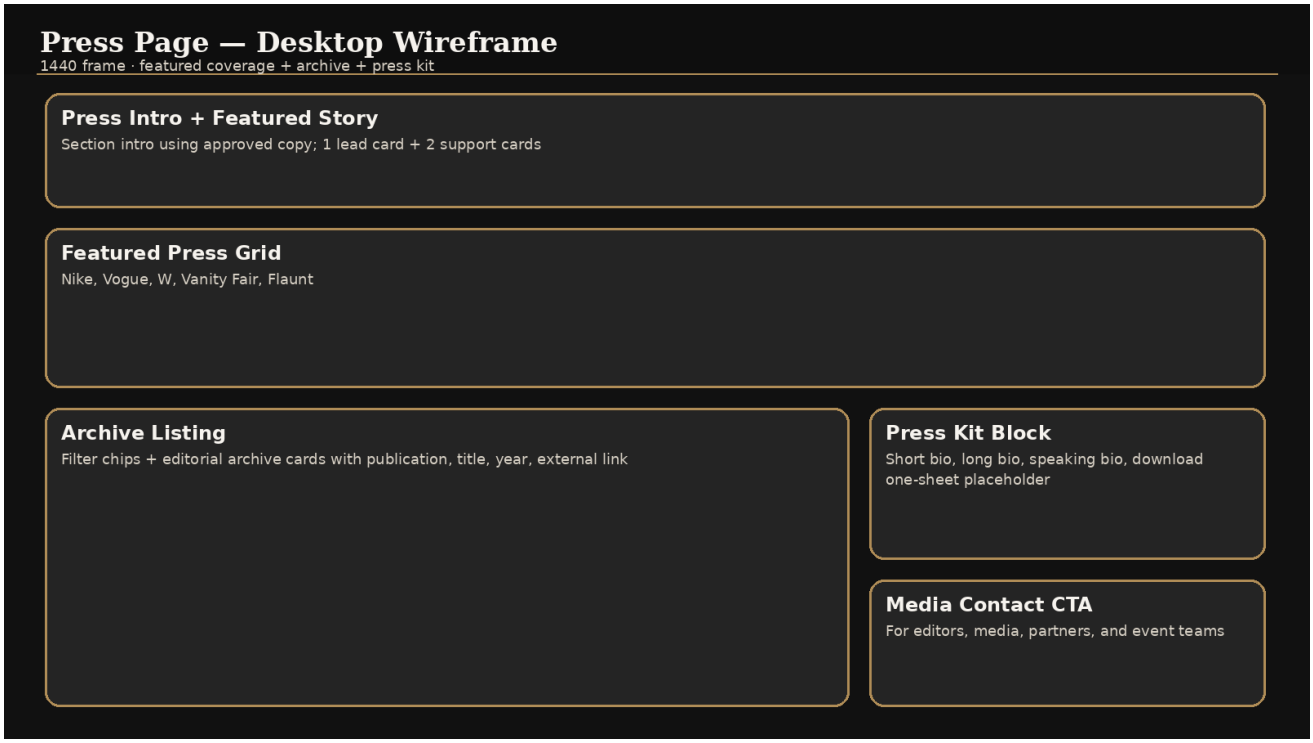
Section Purpose: The page combines social proof, self-serve media materials, and direct contact pathways.

Recommended Layout: Use a featured top band with one dominant press story and two support cards. Below, build a filterable archive list. Anchor the right column with a press kit block and media CTA.

Image Treatment: Press cards can use supporting thumbnails or typographic-only cards where imagery is missing. Maintain consistent card heights.

Copy Placement: Use the provided Press Intro and Press Kit Intro from the copy deck. The short bio, long bio, and speaking/brand partnership bio live in expandable or tabbed press kit content.

Interaction Notes: Featured cards lift slightly on hover; archive rows underline on hover. External-link affordance should be visible but restrained.



Contact / Book page mockup direction

Page Goal: Turn the inquiry experience into a designed luxury interaction rather than a generic form.

Section Order: Premium inquiry intro, inquiry-type panel, booking form, travel/location/contact block, success/error state panel, footer.

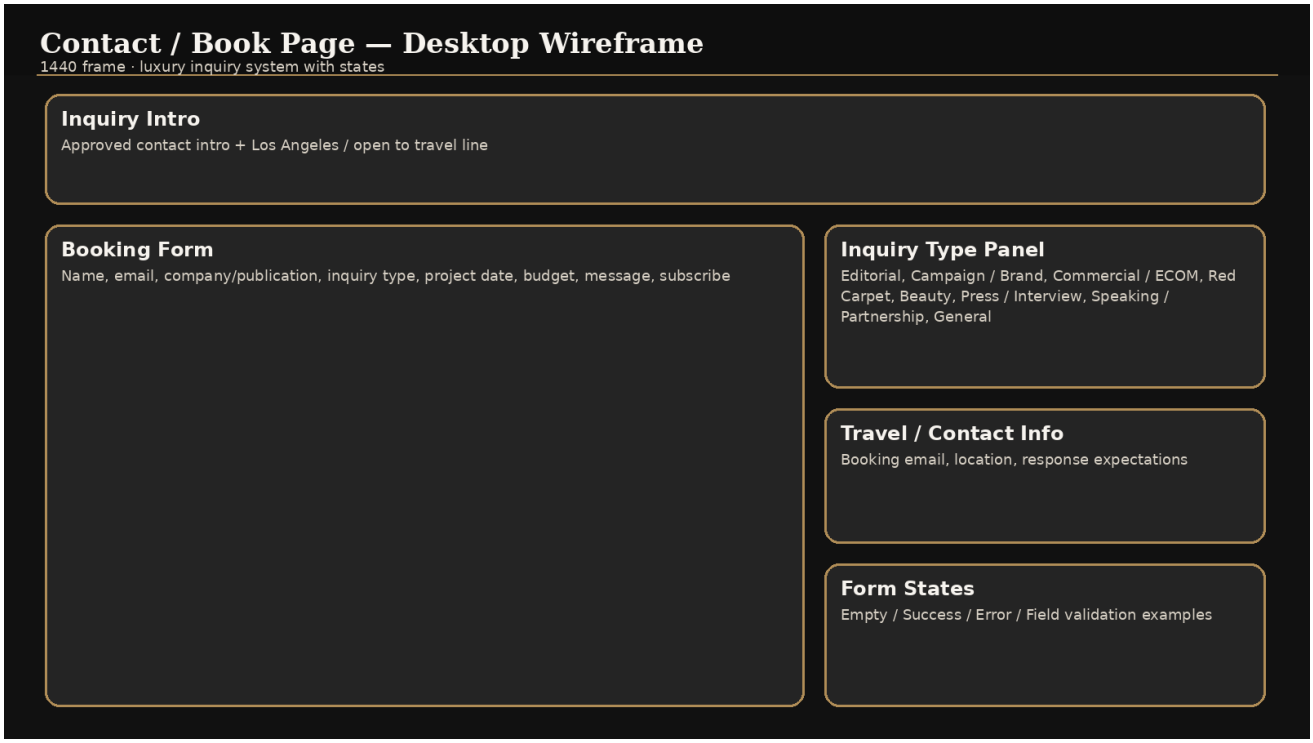
Section Purpose: This page converts editorial, campaign, press, and speaking interest into structured inquiries while reinforcing professionalism.

Recommended Layout: Two-column desktop system: form left, inquiry guidance and response states right. On mobile, intro and inquiry types sit above the form.

Image Treatment: Keep this page mostly typographic. Optional restrained background image or tonal texture only in the hero band.

Copy Placement: Use the exact Contact / Book intro, support line, and form prompt from the copy deck. Keep response-time language concise.

Interaction Notes: Fields use refined focus states, generous padding, and visible validation. Success state should feel elegant and reassuring, not transactional.



Additional scalable portfolio page/template direction

Page Goal: Provide a reusable template for Covers, Beauty, and Commercial/ECOM that can flex without redesigning the full system.

Section Order: Hero, secondary highlight row, adaptive grid, press linkage or next-category CTA, footer.

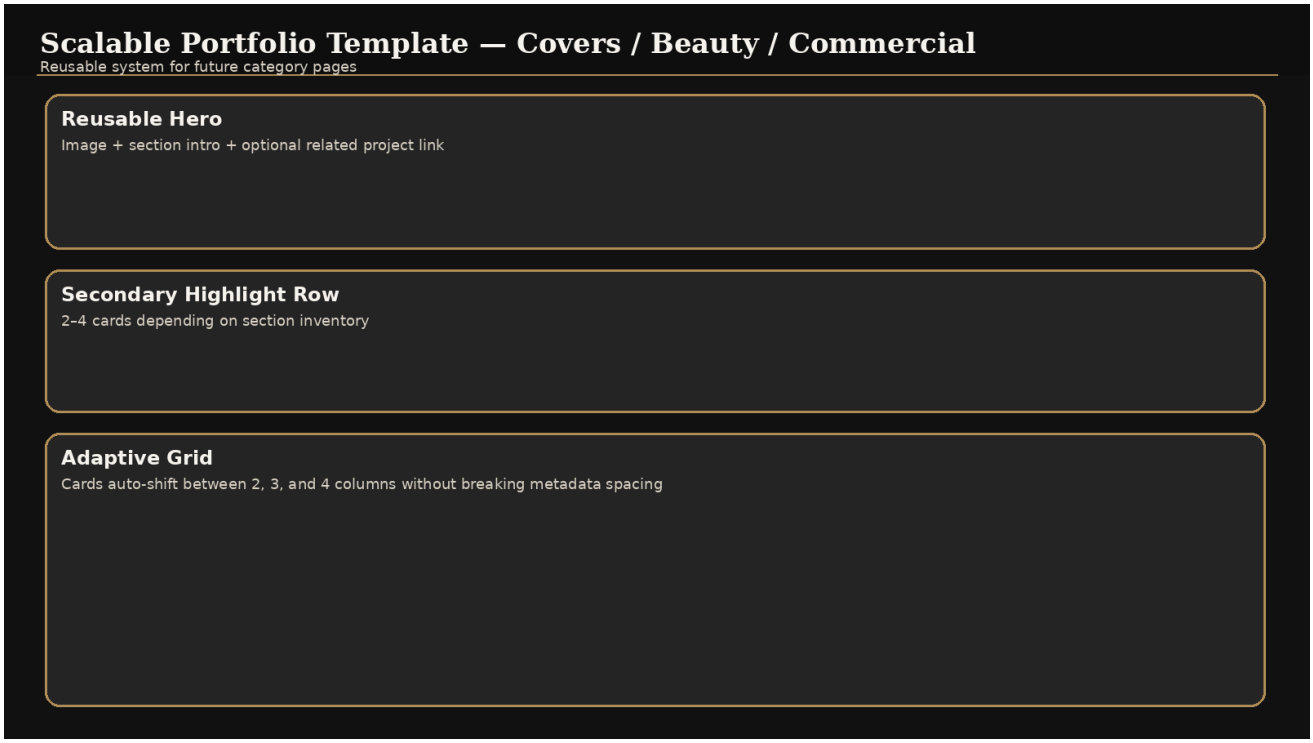
Section Purpose: This gives the design system a repeatable category structure for smaller or growing image sets.

Recommended Layout: Use a hero plus 2 to 4 highlight cards, then an adaptive grid that can run 2, 3, or 4 columns depending on count and crop type.

Image Treatment: Commercial/ECOM should be cleaner and more brand-forward. Covers should feel prestige-led. Beauty should use more whitespace and tighter close-up emphasis.

Copy Placement: Each template uses the relevant portfolio intro and compact captions only.

Interaction Notes: The template should gracefully support placeholders for future inventory without breaking the page rhythm.



4. FIGMA-READY WIREFRAME SPEC

HOME / DESKTOP

Frame width: 1440

Grid: 12-column grid, 72 margins, 24 gutters

Approximate section heights: Hero 720, pub strip 64, featured comp 520, category band 360, about/press/contact band 260, footer 180

Component names: NAV/Header, Hero-Editorial, Publication-Strip, Image-Card/Featured, Category-Tile, About-Preview, Press-Card, CTA-Band, Footer

Layer naming guidance: Use Page/Home/Desktop/*, Section names numbered top-to-bottom, image groups named by slot not by guesswork

Responsive behavior: Below 1024: collapse category column into 2-up tile band; below 768: convert featured composition into a curated single-column rhythm

HOME / MOBILE

Frame width: 390

Grid: 4-column grid, 20 margins, 12 gutters

Approximate section heights: Header 72, hero 360, pub strip 48, curated stack 560, categories 320, about 88, press 136, CTA/footer 180

Component names: Nav-Mobile, Hero-Mobile, Image-Card/Stacked, Category-Tile/Mobile, Press-Card/Mobile, CTA-Band/Mobile

Layer naming guidance: Use Page/Home/Mobile/* and preserve slot order from desktop logic

Responsive behavior: Menu becomes overlay; category tiles become 2-up then 1-up as needed

PORTFOLIO / EDITORIAL

Frame width: 1440

Grid: 12-column grid, 72 margins, 24 gutters

Approximate section heights: Hero 520, intro 96, feature row 220, main grid 520, lower grid 520, next CTA 140, footer 160

Component names: Portfolio-Hero, Meta-Strip, Editorial-FeatureCard, Editorial-GridCard, Next-Category-CTA

Layer naming guidance: Name cards by section and slot: Editorial/Feature/01 etc.

Responsive behavior: At tablet, feature row becomes 2-up + 1 full width; at mobile, cards stack but maintain story pairing

PORTFOLIO / RED CARPET

Frame width: 1440

Grid: 12-column grid, 72 margins, 24 gutters

Approximate section heights: Hero 500, highlight band 250, mid grid 420, lower grid 420, CTA 140, footer 160

Component names: Portfolio-Hero, RedCarpet-HighlightCard, Event-Meta, GridCard/Portrait

Layer naming guidance: Use event-year naming where known

Responsive behavior: At tablet, portrait cards remain tall; do not force square crops

PRESS

Frame width: 1440

Grid: 12-column grid, 72 margins, 24 gutters

Approximate section heights: Intro 120, featured band 260, archive 520, press kit 320, media CTA 120, footer 160

Component names: Press-Hero, Press-FeaturedCard, Press-ArchiveRow, PressKit-Block, Media-CTA

Layer naming guidance: Use Press/Featured/* and Press/Archive/*

Responsive behavior: Right rail drops below archive on smaller widths

CONTACT / BOOK

Frame width: 1440

Grid: 12-column grid, 72 margins, 24 gutters

Approximate section heights: Intro 140, form 620, right rail 620, footer 160

Component names: Form-Input, Form-Select, Form-Textarea, Inquiry-TypeList, Contact-Info, Form-StateCard

Layer naming guidance: Name fields by true field labels for dev handoff

Responsive behavior: At tablet/mobile the right rail stacks above form states or below form depending on CTA priority

COMPONENT LIBRARY

Frame width: 1600

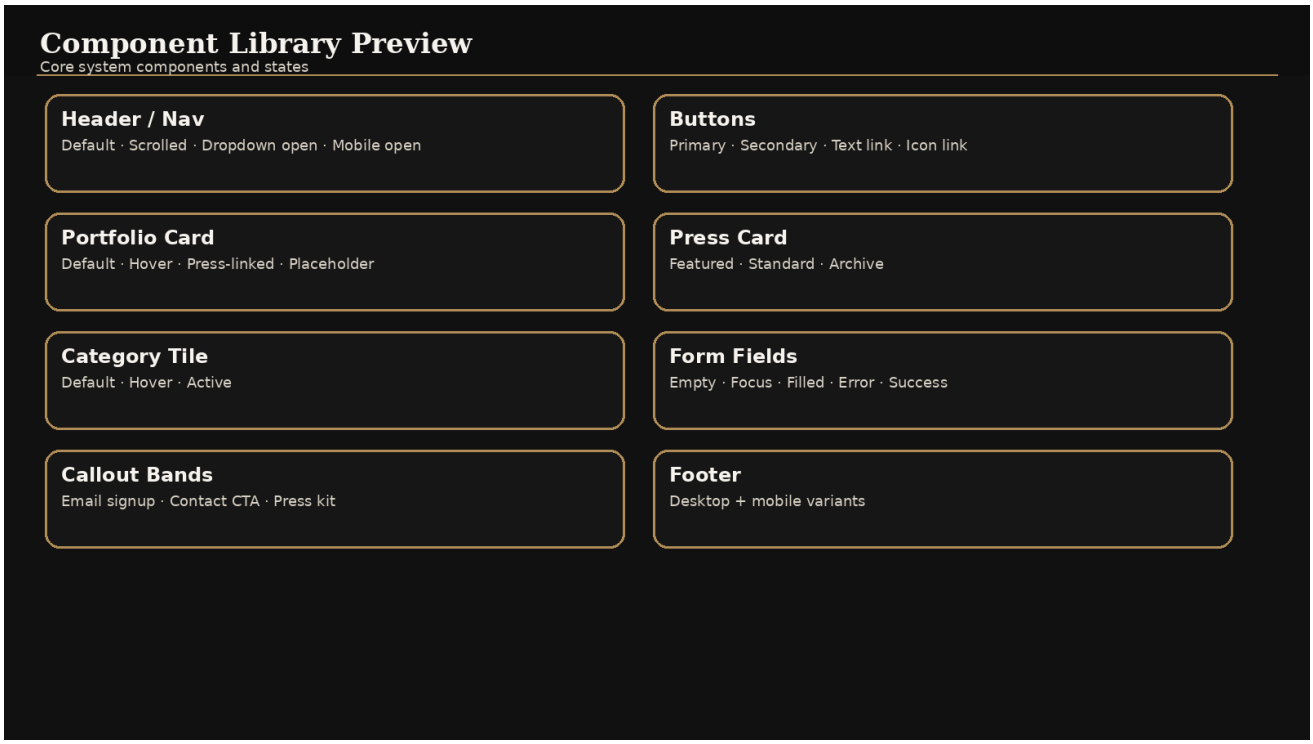
Grid: 8-column presentation grid

Approximate section heights: Header row 120, components variable

Component names: Header/Nav, Button, Link, Category-Tile, Image-Card, Press-Card, Form-Field, CTA-Band, Footer

Layer naming guidance: Use Component/Name/Variant/State

Responsive behavior: Maintain one frame per component family plus overview board



5. COMPONENT LIBRARY SPEC

Component	Variants	States	Token logic	Implementation notes
Navigation	Desktop default, scrolled, portfolio dropdown open, mobile closed, mobile open	Hover, active, focus-visible	Color tokens: bg/obsidian, text/white-gold, accent/gold, focus/jade	Keep header slim; logo left, primary links right; Press Kit remains nested inside Press.
Buttons	Primary, secondary, tertiary text-link, icon-link	Default, hover, active, focus, disabled	Primary dark on light or white-gold on dark; secondary outlined gold; focus	Button radius stays restrained; avoid rounded consumer-app shapes.

			uses jade	
Portfolio image cards	Featured, standard, press-linked, placeholder	Default, hover, focus, loading	Card backgrounds neutral; metadata text white-gold or black based on image field	No heavy borders. Hover should never distort crop integrity.
Category tiles	Desktop tall tile, desktop wide tile, mobile 2-up, mobile full-width	Default, hover, active	Use image overlay, title, one-line descriptor, arrow/underline state	Treat as navigation objects, not decorative banners.
Press cards	Featured card, standard card, archive row	Default, hover, external-link focus	Use gold keyline only at high-emphasis level; jade for focus	Cards must feel editorial archive, not marketing blog cards.
Form fields	Text, email, select, date, textarea, checkbox	Empty, focus, filled, error, success, disabled	Inputs on white or soft mist fields with obsidian type; error can use muted red; success uses jade	Large vertical padding and clear labels. Error copy must sit close to the field.
CTA bands	Email signup, contact CTA, press kit CTA	Default, hover for internal links	Dark/light inversions tied to section context	CTA bands separate page phases without feeling like ads.
Footer	Desktop, mobile	Default	Obsidan background with restrained gold rules and white-gold text	Should contain navigation, contact, travel line, and legal/social links.

Design tokens

- Color: --obsidian-900 #111111; --gold-600 #B08D57; --white-gold-300 #D8D1C5; --jade-700 #145B4B; --jade-100 #C7D9D2; --surface-ivory #F7F3EE.
- Type scale desktop: 64 hero display, 40 page title, 28 section title, 18 lead, 16 body, 14 metadata, 12 microcopy. Mobile: 40, 28, 22, 16, 15, 13, 11.
- Spacing scale: 8, 16, 24, 40, 64, 96, 144. Use 24 for card padding, 40 for section inset, 64–96 for section gaps.
- Borders: 1px quiet rules, 2px emphasis rules only where needed. Border radius 0–8 max; avoid soft consumer-style curves.
- Shadow: near-none. Use tonal separation and keylines before shadows.

6. ASSET GAP NOTES

- Beauty: The prompt target requested a 13-slot Beauty structure, but the governing handoff materials and workbook verify only 6 Beauty images. Phase 1 therefore uses a 6-image Beauty system and flags 7 additional beauty assets as future placeholders if the category is expanded later.
- Red Carpet: The PRD contains an older 23-tile structure, but the governing designer package, engineer handoff, and workbook verify 18 launch tiles. Phase 1 uses the 18-tile structure.
- Commercial / ECOM: The older PRD references a 7-tile page, but the workbook and governing docs verify 8 launch images. Phase 1 uses 8.
- Homepage: Supported at 12 placements through the Homepage Final sheet. One of the 12 comes from editorial crossover rather than the Homepage primary-section count alone.
- Folder-level validation: Only Commercial-ECOM.zip was physically present for direct archive verification. Other categories were validated from the audited workbook and governing briefs, not from uploaded image folders.
- Press kit draft source: MDW_Press_Kit_Draft.docx was not available in the uploaded package. Press page and press kit block were planned using the PDF press kit reference plus the approved copy deck.

Layouts using placeholders vs real assets

- Homepage, Editorial, Red Carpet, Press, and Contact layouts are planned with real, workbook-verified content logic.

- Beauty expansion beyond 6 images would require 7 future placeholders if a 13-slot concept is later requested.
- Scalable category template explicitly supports placeholder cards for future Covers, Beauty, or Commercial additions without breaking rhythm.

7. FINAL DELIVERABLE CHECKLIST

- Desktop homepage mockup direction
- Mobile homepage mockup direction
- Editorial portfolio category page mockup direction
- Red Carpet portfolio category page mockup direction
- Press page mockup direction
- Contact / Book page mockup direction
- Additional scalable portfolio page/template direction
- Responsive navigation concept
- Desktop and mobile menu states
- Type scale
- Spacing system
- Hover and interaction notes
- Design tokens
- Image behavior guidance
- Contact form empty, success, and error states
- Component library preview
- Figma-ready frame naming, grid, margin, and responsive notes
- Asset gap summary and placeholder logic
